The cam position sensor is critical to the proper functioning of the engine management system in its timing of engine events. The sensor delivers information on the position of the camshaft that actuates the engine's intake valves to the computer, which uses that information to deliver fuel and spark at the correct time.

VR6 engines, and the later VR5 variants, are a family of internal combustion engines, characterised by a narrow-angle (10.5° or 15°) V engine configuration. Developed by the Volkswagen Group in the late 1980s, evolutions of these engines are still produced by them.. When containing six cylinders, a VR-engine's cylinder block consists of two cylinder banks (left: 1-3-5; right: 2-4-6) while ...

Touring car racing is a motorsport road racing competition with heavily modified road-going cars. It is popular in Argentina, Australia, Brazil, Britain, Germany, Sweden and Norway. It has both similarities to and significant differences from stock car racing which is popular in the United States.. While not as fast as Formula One, the similarity of the cars both to each other and to fans' own ...
