the mathematical thinking skills required to master modern pure mathematics are precisely the crucial mental abilities required to succeed in many professions and walks of life, as I just discussed.

mathematical models and how to use them. There is a huge range of useful models invading the Life Sciences: Richard Dawkins's [1, 2, 3] little stick creatures which evolve and mutate can sharpen our ideas, and also dramatise them so you can see evolution working. Cellular automata can tell us things about growth and evolution that again sharpen our ideas.

of computers and the Internet. This book provides an introduction to the theory of public key cryptography and to the mathematical ideas underlying that theory. Public key cryptography draws on many areas of mathematics, including number theory, abstract algebra, probability, and information theory. Each

Chapter 2, Mathematical Grammar, provides an introduction to the reading and writing of mathematical sentences and to some of the special words that we use in a mathematical argument. Chapter 3, Strategies for Writing Proofs, is a sequel to the chapter on mathematical grammar. The message of this chapter is that the nature of an assertion

Probability and Mathematical Statistics 1 Chapter 1 PROBABILITY OF EVENTS 1.1. Introduction During his lecture in 1929, Bertrand Russell said, "Probability is the most important concept in modern science, especially as nobody has the slightest notion what it means." Most people have some vague ideas about what probability of an event means.

The mathematical topics in this chapter don't together in any particular way, so don't look for some mathematical theme which connects them. Instead, you should view this chapter as a sampler of different types of proofs. In fact, much of the material of this chapter will be familiar to you. As we discuss each

mathematical logic. [In the belief that beginners should be exposed to the easiest and most natural proofs, I have used free-swinging set-theoretic methods. The significance of a demand for constructive proofs can be evaluated only after a certain amount of experience with mathematical logic has been obtained.
