guqin provide analysis results, a control algorithm, and two model-based sound synthesis methods in the following way. For a modified design of the kantele, acoustical measurements and formal listening tests support the assumption of increased loudness. The investigation also provides design rules to make a plucked stringed instrument louder. An

Loudness and timbre issues in plucked stringed instruments

The second part introduces the systems engineering problem-solving process, and discusses in basic terms some traditional techniques used in the process. An overview is given, and then the process of requirements analysis, functional analysis and allocation, design synthesis, and verification is explained in some detail.
