This material, known as J-sheet, was later replaced by the improved H-sheet Polaroid, invented in 1938 by Land. H-sheet is a polyvinyl alcohol (PVA) polymer impregnated with iodine.During manufacture, the PVA polymer chains are stretched such that they form an array of aligned, linear molecules in the material.

Polaroid (polarizer) - Wikipedia

Polaroid (polarizer) - Wikipedia
A polarizer is an optical filter that lets light waves of a specific polarization pass through it. It is used to reduce glare and to analyze the polarization of light. The most common type of polarizer is the Polaroid filter, which is made of a material that has a regular array of long-chain molecules. When light passes through the filter, only the light waves that are parallel to the molecules can pass through. The other light waves are blocked. The result is a beam of polarized light. Polaroid filters are used in many applications, including sunglasses, camera lenses, and scientific instruments.
