## **healing the fracture america pdf**

INDIRECT FRACTURE HEALING. Indirect (secondary) fracture healing is the most common form of fracture healing, and consists of both endochondral and intramembranous bone healing. 17 It does not require anatomical reduction or rigidly stable conditions. On the contrary, it is enhanced by micro-motion and weight-bearing.

weeks after the fracture. Bone remodeling, the final phase of bone healing, goes on for several months. In remodeling, bone continues to form and becomes compact, returning to its original shape. In addition, blood circulation in the area improves. Once adequate bone healing has occurred, weightbearing (such as standing or walking) encourages bone remodeling.
