Radial immunodiffusion (RID) or Mancini method, Mancini immunodiffusion or single radial immunodiffusion assay, is an immunodiffusion technique used in immunology to determine the quantity or concentration of an antigen in a sample.

Radial immunodiffusion - Wikipedia

This is very well researched and presented book, it has grown from its previous edition, It has grown to a fairly weighty tome. But this has not distracted from its usefulness, it comprehensively goes through all aspects of transfusion serology, as it relates to the bench, and is also of use to the clinician.

Applied Blood Group Serology: 9780935643053: Medicine

A medical laboratory or clinical laboratory is a laboratory where clinical pathology tests are carried out on clinical specimens to obtain information about the health of a patient to aid in diagnosis, treatment, and prevention of disease. Clinical Medical laboratories are an example of applied science, as opposed to research laboratories that focus on basic science, such as found in some ...

Complete blood count. A complete blood count (CBC) gives information on a number of haematological parameters, but generally in pregnancy the most useful are the haemoglobin, platelets and white blood cell count. Most laboratories will provide pregnancy adjusted reference ranges to enable easier interpretation.

Routine laboratory testing during pregnancy - Best Tests

A first improvement came from the use of heterologous egg extracts. In 1973, Niel et al. used immunoelectrophoresis (IEP) to test various antigenic extracts from several *Ascaris* and *Toxocara* species against sera from patients presenting with chronic blood eosinophilia (Niel et al., 1973). When extracts from female *A. suum* genital tracts were used, these authors observed a characteristic ...
