It should however be noted that lipid-protein interactions are not limited to the bilayer surface. The interactions taking place at the lipid-protein inter-faces are also important for the regulation of bilayer functions. At lipid-protein interfaces amino acid side chains will require the sealing of lipids to

Interaction is a key aspect of function, and function is a key aspect of design. Davis and Buchanan expand the way we look at design and suggest that artifact-human interaction be a criterion for evaluating the results of all design work. Their point of view raises the question: Is interaction with a static object different from interaction with a

Section 1.1 Functions and Function Notation 3 Rather than write  $h$  is a function of  $a$ , we could use the descriptive variable  $h$  to represent height and we could use the descriptive variable  $a$  to represent age.  $h$  is a function of  $a$  if we name the function  $f$  we write  $h$  is  $f$  of  $a$  or more simply  $h = f(a)$  we could instead name the function  $h$  and write
