that of a crude centrifugal pump (sans volute of course). It demonstrates that the flow and head (pressure) developed by a centrifugal pump depends upon the rotational speed and, more precisely, the peripheral velocity of its impeller (pail). Peripheral Velocity & Head Gravity is one of the more important forces that a centrifugal pump must overcome.

the operation of these types of pumps in accelerator vacuum systems. 2. MECHANICAL PUMPS In mechanical pumps, the gas present in a vacuum system is transferred from a low pressure to a higher pressure region. In order to be efficient, the pump has to provide simultaneously a finite pumping speed and compression.
