13 Qualitative data mining Consider the mining of numerical data. Usually, in machine learning used for numerical data mining, the goal is to construct a numerical function of the form $y = f(x_1, x_2, \dots)$ where y is a distinguished variable called the dependent variable, and x_1, x_2, \dots are attributes (or independent variables).

Stakeholder analysis means many things to different people. Various methods and approaches have been developed in different fields for different purposes, leading to confusion over the concept and practice of stakeholder analysis.

Who's in and why? A typology of stakeholder analysis

Data analysis is a process of inspecting, cleansing, transforming, and modeling data with the goal of discovering useful information, informing conclusions, and supporting decision-making. Data analysis has multiple facets and approaches, encompassing diverse techniques under a variety of names, while being used in different business, science, and social science domains.

Data analysis - Wikipedia

Broadly speaking, a risk assessment is the combined effort of 1. identifying and analyzing potential (future)

events that may negatively impact individuals, assets, and/or the environment (i.e., risk analysis); and 2. making judgments "on the tolerability of the risk on the basis of a risk analysis" while considering influencing factors (i.e., risk evaluation).
