The heat death of the universe is a plausible ultimate fate of the universe in which the universe has evolved to a state of no thermodynamic free energy and therefore can no longer sustain processes that increase entropy. Heat death does not imply any particular absolute temperature; it only requires that temperature differences or other processes may no longer be exploited to perform work.

### **Heat death of the universe - Wikipedia**

Information entropy is the average rate at which information is produced by a stochastic source of data.. The measure of information entropy associated with each possible data value is the negative logarithm of the probability mass function for the value:  $H = -\sum p_i \log p_i$ . Thus, when the data source has a lower-probability value (i.e., when a low-probability event occurs), the event carries more ...

Abstract. The present work investigates the potential of Lantana camara, a forest waste, as an adsorbent for the phenol reduction in wastewater. Batch studies were conducted with adsorbent treated with HCl and KOH to determine the influence of various experimental parameters such as pH, contact time, adsorbent dosage, and phenol concentration.

4  $D T = 1 / k'$  (2) The use of D 90 or D 10 refers to the fact that after a treatment time  $t = 1 / k'$ , 90% of the microbial population is destroyed or, alternatively, 10% of the population survives.
