The biological basis of personality is the collection of brain systems and mechanisms that underlie human personality. Human neurobiology, especially as it relates to complex traits and behaviors, is not well understood, but research into the neuroanatomical and functional underpinnings of personality are an active field of research. Animal models of behavior, molecular biology, and brain ...

Self-Determination Theory (SDT) is a theory of motivation.. It is concerned with supporting our natural or intrinsic tendencies to behave in effective and healthy ways. SDT has been researched and practiced by a network of researchers around the world.. The theory was initially developed by Edward L. Deci and Richard M. Ryan, and has been elaborated and refined by scholars from many countries.

Computational detection and understanding of empathy is an important factor in advancing human-computer interaction. Yet to date, textbased empathy prediction has the following major limitations: It underestimates the psychological complexity of the phenomenon, adheres to a weak notion of ground truth where empathic states are ascribed by third parties, and lacks a shared corpus.

Colour personality. From the Resene colour choices booklet. Science has long recognised that colour affects our behaviour and the way we feel. After all, itâ€™s the first thing we register and that we use to help assess the things around us, such as whether certain foods, such as blue ones, might be poisonous, for example.
